1. Executive Summary

Subspace is an Indian digital commerce platform that bundles three distinct value propositions under one roof: a **discounted gift-card marketplace**, a **peer-to-peer subscription-sharing network**, and a **digital wallet** with payout capabilities. The platform targets cost-conscious Indian consumers — particularly students and OTT-heavy households — who want to reduce recurring subscription spend.

UI Design 8.5	Discovery 8.0	Subscription UX 8.0	Search 7.5
Checkout Flow 6.0	Trust & Safety 6.5	Onboarding 6.5	Overall 7.6

Key Strengths

- Visually polished dark-theme UI with strong discount visibility across all pages
- Unique subscription-sharing model with group formation, slot management, and peer trust signals
- FlexiPay custom-denomination gift cards add flexibility not found on competing platforms
- AI-powered mailbox and subscription tracking add ecosystem depth and retention hooks
- Broad brand catalog covering OTT, Food, Shopping, Travel, and more

Critical Gaps

- Core value proposition is not immediately visible on the homepage — new users face confusion
- Cart state inconsistency (BUG-001) causes items to disappear, creating critical checkout failure
- Repeated 'Item is not Available' toasts (BUG-002) damage trust at the decisive purchase moment
- Insufficient trust-building content for subscription-sharing — the core differentiating feature
- Onboarding: no walkthrough, empty chat page on first use, unclear subscription-sharing concept

Verdict: Subspace has real product-market fit in the Indian cost-savings segment. Fixing checkout reliability and strengthening the onboarding narrative are the two highest-ROI investments the team can make today.

2. Product Overview & Positioning

Subspace operates at the intersection of three growing Indian consumer trends: subscription fatigue, deal-hunting culture, and peer trust networks. The platform is accessible via web (subspace.money) and mobile apps (Android & iOS).

PILLAR	DESCRIPTION	EXAMPLES
Gift Cards	Discounted digital gift cards for 100+ brands	Zee5, Myntra, Zomato, Google Play, Amazon
Subscription Sharing	Join shared subscription groups at per-user pricing	Swiggy One, JioCinema, Netflix, Spotify
Subspace Minutes	Pre-paid subscription packs for specific services	Streaming, Food, Utilities
Wallet	In-app wallet for payments and earnings from group hosting	FlexiPay, Bank Withdrawal, Top-up
Track Subscriptions	Log and monitor personal subscription expenses	KodeKloud, any external subscription
Chat	Messaging between group members for coordination	Group chat, Private chat, Anonymous

Figure 2 — Subspace Homepage (Dark Mode): Gift Cards, Shared Subscriptions, and Favourite Brands sections visible.
Observation: Multiple competing sections with no single dominant CTA.

3. User Personas

Aryan — The Subscription Splitter

21 y/o · Engineering Student, Kolkata

Goals

- ✓ Split Netflix/Spotify costs with friends
- ✓ Track all subscriptions in one place
- ✓ Use gift cards for everyday OTT top-ups

Pain Points

- ✗ Can't afford multiple solo subscriptions
- ✗ Trusts only known people for sharing
- ✗ Confused about how platforms handle shared credentials

Priya — The Deal Hunter

28 y/o · Marketing Executive, Bengaluru

Goals

- ✓ Buy discounted gift cards for Myntra/Zomato
- ✓ Earn cashback via group hosting
- ✓ Use FlexiPay for variable grocery budgets

Pain Points

- ✗ Finds checkout flow unreliable
- ✗ Wants faster delivery of gift card codes
- ✗ Unsure about refund guarantees on digital goods

Rahul — The Group Host

32 y/o · Freelance Developer, Mumbai

Goals

- ✓ Host subscription groups and earn per slot
- ✓ Withdraw earnings to bank easily
- ✓ Manage group communication in-app

Pain Points

- ✗ Wallet withdrawal process needs more transparency
- ✗ Group trust signals feel weak for new joiners
- ✗ Chat feature is hard to discover initially

4. User Journey Map

Journey A — Gift Card Purchase

STAGE	ACTION	FEELING	FRICTION POINT	SEVERITY
Discovery	Lands on homepage via Google/referral	Curious	Multiple CTAs — no single clear entry point	Medium
Browse	Clicks brand from Favourite Brands	Interested	Hero banner pushes products below fold	Medium
Evaluate	Views discount %, product cards, pricing	Positive	How to Redeem collapsed — easy to miss	Low
Add to Cart	Clicks 'Add to Cart' on product card	Confident	Cart count inconsistency — item may disappear	Critical
Checkout	Opens cart, reviews order summary	Anxious	'Item is not Available' toast — unexpected failure	Critical
Payment	Applies coupon, proceeds to pay	Hopeful	Coupon UX unclear — no feedback on validity	Medium

Journey B — Joining a Subscription Group

STAGE	ACTION	FEELING	FRICTION POINT	SEVERITY
Awareness	Sees 'Shared Subscriptions' section on homepage	Confused	Concept of sharing not explained proactively	High
Search	Searches for Swiggy / Netflix subscription	Engaged	Search results clear, instant — no friction	Positive
Evaluate Group	Reviews group owner, rating, slot count	Cautious	Limited trust signals for sharing with strangers	High
Join	Clicks 'Join Group' — confirms payment	Nervous	No explicit refund/dispute process visible	High
Access	Receives credentials via chat/email	Satisfied	AI Mailbox concept not explained before joining	Medium

5. Homepage Analysis

Figure 3 — Explore Page: Prominent promotional carousel (Zomato, JioHotstar, Google Play gift cards), Favourite Brands row with discount %. Observation: Price savings dominate visual hierarchy.

Observations

ID	OBSERVATION	IMPACT	SEV.
HP-01	Homepage immediately shows promotional banners and discounts without explaining what Subspace does. A first-time visitor cannot determine if this is a gift-card shop, subscription manager, or social platform.	Low retention for cold traffic — high bounce risk	High
HP-02	Auto-rotating carousel is the dominant visual element above the fold. Banner content rotates through 9 slides — individual banners receive minimal dwell time.	Promotions receive low engagement; banner blindness likely	Medium
HP-03	Discount percentages (3%, 4%, 48%, etc.) are displayed as the primary brand attribute in the Favourite Brands section. Brand identity is secondary to price.	Strong conversion signal; weak trust-building at top of funnel	Medium
HP-04	No onboarding tooltip, product tour, or 'How it works' explainer on the homepage. New users are immediately confronted with product listings.	High drop-off for users unfamiliar with subscription sharing concept	High
HP-05	Ticker bar at top shows real-time deals — e.g. 'Subspace 60% OFF - Rs.199 for 1 month'. Strong urgency signal. However ticker is small and easy to miss.	Positive urgency element — needs stronger visual prominence	Positive

6. Product Detail Page Analysis

Figure 4 — Swiggy Product Page: Brand banner, rating (4.5★), user count (5.97M), 'How to Redeem' section collapsed, and group join CTA. Subscription group visible with per-user pricing.

Figure 5 — Zee5 Product Page: 5 products available, gift cards at 22% OFF, Premium HD Yearly at 50% OFF. Strong price transparency. Multiple Add-to-Cart options visible.

Figure 6 — Google Playstore Product Page: FlexiPay feature allowing custom denomination (Rs.10–Rs.5000) with 2.5% discount. Input field initialises at Rs.0 — missing helpful placeholder.

Figure 7 — Nykaa Product Page: 'How to Redeem' section expanded showing step-by-step redemption instructions with left-border accent styling. FlexiPay (4.5% OFF) with Rs.250–Rs.10000 range. Note: Rs.0 FlexiPay initialisation reproduced again across a different brand [BUG-006].

ID	OBSERVATION	IMPACT	SEV.
PDP-01	Large colored hero banner (Swiggy orange, Zee5 gold) occupies ~35% of viewport height. Actual product cards require scrolling to reach.	Extended path to conversion — products pushed below fold	Medium
PDP-02	'How to Redeem' section is collapsed by default. This is the most critical information for a first-time buyer of digital goods — but requires an extra click.	Users may purchase without understanding redemption — increases support load	Medium
PDP-03	Discount tags (22% OFF, 50% OFF) are prominently displayed. Both original price and discounted price are shown — clear value communication.	Strong pricing transparency drives purchase confidence	Positive
PDP-04	FlexiPay input initialises at Rs.0 with no placeholder text or format hints. Min/max range (Rs.10–Rs.5000) is shown as secondary text only.	Users may submit invalid amounts — poor form UX	Medium
PDP-05	Rating (★4.5), review count (5.97M), and brand category tags are displayed as badges near the logo — effective social proof and credibility signals.	Builds trust and provides context for unfamiliar brands	Positive

7. Subscription Group Experience

Figure 8 — Swiggy Group Listing Page: Top-Ranked filter, group owner 'Rama Ray' with 5.0★ rating, active status '1 minute ago', Rs.150/device/month, 1 available slot. Join Group CTA prominent.

Figure 9 — Add Subscription Modal (KodeKloud): Plan selection (Pro – Rs.11970/month), Expiry Date picker, Make Public toggle. Allows hosts to list their subscription for group sharing.

ID	OBSERVATION	IMPACT	SEV.
GRP-01	Group owner profile shows name, photo, last-active timestamp, and star rating. This is the primary trust signal in the sharing flow.	Positive trust anchor for cautious joiners	Positive
GRP-02	No verified badge, ID verification indicator, or Subspace guarantee shown on group cards. Users are sharing real money with strangers.	High perceived risk — reduces conversion for new users	High
GRP-03	Slot count is highlighted in green (e.g. '1 slot available') — creates scarcity signal effectively nudging users to act quickly.	Strong FOMO-driven conversion mechanism	Positive
GRP-04	No explanation visible of what happens after joining: how credentials are shared, what the AI Mailbox does, or what recourse exists if the host disappears.	Post-join experience anxiety — high likelihood of support tickets	High
GRP-05	Host-side flow (Add Subscription modal) allows expiry date setting and public/private toggle. Clean, minimal form that reduces listing friction for hosts.	Low barrier to supply creation — supports marketplace liquidity	Positive

8. Search & Discovery

Figure 10 — Quick Search (query: 'ze'): Instant results show Zee5, Zepto, Zepto Pass, Zendesk, Zenefits with category labels (Entertainment, Food, Services, Tools). No filter controls in dropdown.

Figure 11 — Change Location Modal: Detect location button, manual search field, and Add New Address option. Clean and functional design.

Figure 12 — Search Results Page (query: 'kodecloud'): 2 results found — KodeKloud under 'Track Subscriptions' and Herbal Tea Subscription under 'Offline Products'. Broken image visible on Herbal Tea card (BUG-004).

ID	OBSERVATION	IMPACT	SEV.
SCH-01	Instant search results appear with no perceptible latency from first keystroke. Category labels (Entertainment, Food, Tools) provide immediate context.	Excellent discoverability — low search friction	Positive
SCH-02	No filter or sort controls visible in the search dropdown or results page. As catalog grows, filtering by category, discount %, or type will be essential.	Scalability concern — discovery degrades with catalog growth	Medium
SCH-03	Search results page categorises results into 'Track Subscriptions' and 'Offline Products' — semantically useful but the terminology may confuse non-power users.	Cognitive overhead for casual users unfamiliar with platform terminology	Low
SCH-04	KodeKloud shows a rating of 0.0★ in search results. This is likely a data initialisation bug — a 0.0 rating undermines credibility.	Trust signal pollution — users may skip valid products due to false 0-star rating	Medium

9. Cart & Checkout Flow

Figure 13 — Zee5 Page: Three simultaneous 'Item is not Available' toast notifications appear immediately after attempting to add items. Cart counter shows 1 despite error. [BUG-002]

Figure 14 — Shopping Cart Page: Cart appears empty with 'Your cart is empty' state despite earlier add-to-cart action. Cart state not persisted correctly. [BUG-001]

Figure 15 — Cart with Item (Myntra): Order summary shows Rs.6382.27 subtotal, Wallet Balance deduction, coupon code field, and Proceed to Payment button. Clean order summary layout when items are present.

Figure 16 — Successful Add-to-Cart Toast (Myntra): Green confirmation toast 'Added to Cart! Rs.6382.27 FlexiPay' with 'View Cart' CTA appears correctly. Cart counter increments to 1. This represents the working state — contrast with BUG-001 where cart appears empty after a similar action on Zee5.

ID	OBSERVATION	IMPACT	SEV.
----	-------------	--------	------

CART-01	Cart becomes empty after items are added in the same session (observed on Zee5 product page). This is reproducible and represents a critical state management failure.	CRITICAL: Direct revenue loss — purchase intent nullified	Critical
CART-02	Three simultaneous 'Item is not Available' toast notifications appeared for a single product. Toasts duplicate, stacking vertically and blocking the UI.	CRITICAL: Confusing error handling damages purchase confidence	Critical
CART-03	When the cart pipeline works correctly (Myntra FlexiPay test), the success toast is well-designed — green icon, item name, price, and a direct 'View Cart' CTA. This confirms the UX pattern exists; the bug is intermittent, not by design.	Confirms cart UX design is sound — bug is implementation-layer, not design-layer	Positive
CART-04	When cart functions correctly, the order summary is well-structured: subtotal, wallet deduction, total, coupon field, and clear CTA — all visible without scrolling.	Strong checkout UX when pipeline is functional	Positive
CART-05	Wallet Balance line in order summary shows Rs.0.00 deduction even if user has a balance. No prompt to top-up wallet or apply balance automatically.	Missed opportunity to drive wallet usage and reduce payment friction	Medium

10. Wallet Experience

Figure 17 — Withdraw Money Modal: Account Number and IFSC Code fields with a Verify step, followed by amount entry (minimum Rs.50). Clear two-step verification flow.

Figure 18 — FlexiPay Validation Error (Myntra): User entered '77777777777777777777' — field accepted the long input before showing validation error. [BUG-005]

ID	OBSERVATION	IMPACT	SEV.
WAL-01	Withdrawal modal uses a two-step flow: bank account verification (Account No + IFSC) followed by amount entry. This sequential structure prevents incorrect withdrawals.	Sound financial UX — reduces error probability	Positive
WAL-02	No information visible about withdrawal processing time (T+1? T+3? instant?). Users handling group earnings need this expectation set clearly.	Uncertainty increases support ticket volume for group hosts	Medium
WAL-03	FlexiPay input accepted an 18-digit number (77777777777777777777) before showing a validation error. Front-end should restrict input length in real-time.	Poor input sanitisation — potential UX confusion and edge-case backend errors	Medium
WAL-04	Bank details alert banner visible at top of wallet page warns users to add bank details first. Proactive guidance prevents failed withdrawal attempts.	Good empty-state guidance for new users	Positive

11. Chat & Messaging

Figure 19 — Chat Page (New User State): Left panel shows 'No conversations found' with Group / Private / Anonymous tabs. Right panel shows 'Welcome to Messages' with empty state illustration. No onboarding hint.

The Chat section supports three conversation types — Group, Private, and Anonymous — which is a thoughtful design for a marketplace with trust-sensitive interactions.

However, a new user landing on the Chat page sees only empty states with zero guidance on how to initiate a conversation, join a group chat, or understand the Anonymous channel's purpose. This is a high-severity onboarding gap for the platform's social layer.

Recommendation: Add an inline onboarding card explaining that group chats are automatically created when a user joins a subscription group, and that Private chat can be used to contact a group host before committing to a slot.

12. Profile & Settings

Figure 20 — Profile Sidebar: Complete sidebar navigation including Profile, Payout Methods, Addresses, Order History, Rental History, Friends, Settings, Money Saved, Blogs, AI-Mailbox, Help, Review Us, App Info, Logout.

Figure 21 — AI-Powered Mailbox Onboarding: Three feature highlights — 99% spam blocking, transactional email filtering, and mail-to-group-chat delivery. Clear feature explanation.

Figure 22 — Help & Support: FAQ accordion organised under 'Admin' category, covering withdrawal, subscription discovery, verification, group creation, credential sharing, and payment. Live chat available 9AM–6PM.

Figure 23 — Blogs & Articles: 258 articles with category filters (Partnerships, Merchants, OTT, Finance, Discounts). Content acts as SEO and user education layer.

Figure 24 — Settings Page: Privacy Settings (Hide Phone Number, Hide Email Address toggles), Shared Subscriptions Settings with 'Toggle All Groups Once' master switch — controls public/private visibility of all hosted subscription groups from one place.

Figure 25 — Notification Settings & Quick Reply: Four notification toggles (Message, Subscription Expiry, Coupon Expiry, Promotional). Quick Reply section with empty state — 'No quick replies yet. Click + to add.'

Figure 26 — Add Quick Reply Modal: Shortcut keyword field and Reply Message textarea. Allows group hosts to set canned responses for common joiner questions. Observation: No character limit indicator visible on the Reply Message field.

The Settings page (Figures 23–24) reveals thoughtful power-user features: a master toggle for bulk group visibility management and Quick Reply templates for group hosts — both demonstrating that Subspace has deeply considered the group-hosting workflow. The notification granularity (Subscription Expiry, Coupon Expiry as separate toggles) is excellent for a subscription-focused platform.

Figure 27 — Contact Us Page (subspace.money): Company HQ in Bengaluru, Karnataka. Direct contact via mailus@subspace.money, +91 7483640340, and all social channels. Navigation includes Subspace API and Subspace VPN — indicating platform expansion beyond the marketplace.

The existence of 'Subspace API' and 'Subspace VPN' in the marketing site navigation (Figure 26) signals that Subspace is positioning itself as a broader developer and infrastructure platform — not merely a consumer marketplace. This has strategic implications: B2B API monetization and VPN offerings could diversify revenue and reduce dependency on transaction commissions.

13. UX Audit Summary

AREA	FINDING	RECOMMENDATION	PRIORITY
Onboarding	No walkthrough, tooltip, or 'How it works' explainer for new users	Add a 3-step onboarding modal explaining gift cards, sharing, and wallet	P0
Value Prop	Homepage does not communicate platform purpose clearly	Add a hero section above the fold with a one-line benefit statement	P0
Cart State	Items disappear from cart (BUG-001)	Investigate cart state management — add client-side persistence fallback	P0
Error Toasts	Duplicate 'Item not Available' toasts stack (BUG-002)	Debounce error notifications; show single toast with retry CTA	P0
Trust Signals	Subscription groups lack verified badge or Subspace guarantee	Add 'Subspace Verified Host' badge and a buyer-protection statement	P1
FlexiPay UX	Input initialises at Rs.0; accepts abnormally long strings	Set placeholder to suggested amount range; add maxLength + numeric-only constraint	P1
Chat Empty State	Chat page is empty with no guidance for new users	Add contextual empty-state card explaining how group chats are created	P1
Withdrawal Info	No timeline shown for bank withdrawal processing	Display 'Usually credited within X business days' below the Withdraw button	P2
Redeem Section	How to Redeem pushes product listings below fold	Keep section collapsed by default; surface as a tooltip near Add to Cart	P2
Search Filters	No category or discount filter in search dropdown	Add filter chips (Category, Discount %, Type) in full search results page	P2

14. Bug Report

BUG-001	
Cart State Not Persisted — Items Disappear After Add-to-Cart	
CRITICAL	
Page	Cart / Zee5 Product Page
Steps to Reproduce	1. Navigate to Zee5 product detail page 2. Click 'Add to Cart' on the Rs.399 Gift Card 3. Observe cart counter increment in top navigation 4. Click 'Cart' in the navigation bar 5. Cart page displays 'Your cart is empty'
Expected	Zee5 Rs.399 Gift Card should appear in the Shopping Cart with correct pricing.
Actual	Cart page shows empty state despite successful add-to-cart confirmation.
Impact	Users cannot complete purchases. Revenue loss on every affected session.

Figure 23 — Empty cart state after a confirmed add-to-cart action [BUG-001]

BUG-002

Duplicate Error Toasts — 'Item is not Available' Stacks Three Times

CRITICAL

Page	Zee5 Product Detail Page
Steps to Reproduce	1. Navigate to Zee5 product detail page 2. Attempt to add an out-of-stock or restricted item to cart 3. Observe notification area in top-right corner
Expected	Single error notification indicating the item is unavailable with a clear message.
Actual	Three identical 'Item is not Available' toasts appear simultaneously, stacking vertically and blocking navigation elements.
Impact	Confusing error UX. Navigation partially obscured. User trust eroded.

Figure 24 — Three duplicate error toasts stacked simultaneously [BUG-002]

BUG-003	
3	
CodeKloud Displays 0.0 Star Rating in Search Results	
MEDIUM	
Page	Search Results — 'kodecloud' query
Steps to Reproduce	1. Use the Quick Search and type 'kodecloud' 2. View search results page 3. Observe the KodeKloud card under 'Track Subscriptions'
Expected	Either a valid rating from actual users, or no rating displayed for unrated items.
Actual	KodeKloud displays '0.0' star rating — a data initialisation artefact with no real reviews.
Impact	Users may skip a legitimate product due to false zero-star display, reducing conversion.

Figure 25 — KodeKloud showing 0.0 rating in search results [BUG-003]

BUG-004

Broken Product Image — Herbal Tea Subscription Card

HIGH

Page	Search Results — 'kodecloud' query / Offline Products section
Steps to Reproduce	1. Search for 'kodecloud' using Quick Search 2. Scroll to 'Offline Products' section in results 3. Observe the Herbal Tea Subscription product card
Expected	Product card displays a valid product image for the Herbal Tea Subscription.
Actual	Product image fails to load, rendering an empty dark card with only text below it.
Impact	Reduces visual appeal and perceived product quality. May suppress clicks.

Figure 26 — Herbal Tea Subscription with broken/missing product image [BUG-004]

BUG-005	FlexiPay Input Accepts Arbitrarily Long Numeric String Before Validation	MEDIUM
Page	Myntra / Any FlexiPay Product Page	
Steps to Reproduce	1. Navigate to a product with FlexiPay (e.g. Myntra) 2. Click on the amount input field 3. Type '7777777777777777' (19 digits) 4. Attempt to add to cart	
Expected	Input field restricts entry to a maximum of 5 digits (max Rs.10000). Inline validation prevents invalid input in real time.	
Actual	Field accepts the full 19-digit string and only shows error 'Please enter an amount between Rs.50 and Rs.10000' after submission attempt.	
Impact	Poor input UX. Potential edge-case backend parsing errors with extremely large integers.	

Figure 27 — FlexiPay accepting 19-digit input before validating [BUG-005]

BUG-006	FlexiPay Input Initialises at Rs.0 Across All Brand Pages — Consistent UX Gap	MEDIUM
Page	All FlexiPay-enabled product pages (Nykaa, Myntra, Google Play, etc.)	
Steps to Reproduce	1. Navigate to any product page with FlexiPay (e.g. Nykaa, Myntra, Google Play) 2. Observe the FlexiPay amount input field on page load	
Expected	Input field shows a helpful placeholder such as 'Enter amount (Rs.250 – Rs.10,000)' or pre-fills with the recommended/mid-range value to guide the user.	
Actual	Input field shows 'Rs. 0' as the default value on every FlexiPay-enabled product page regardless of the allowed range (Rs.10–5000 or Rs.250–10000). Confirmed on Nykaa (Figure 7), Myntra, and Google Play Store.	
Impact	Users may attempt to add Rs.0 to cart. Zero-value default is visually misleading and does not guide users toward valid input. Affects all FlexiPay transactions platform-wide.	

Figure 7 — Nykaa FlexiPay showing Rs.0 default — reproduced across all FlexiPay product pages [BUG-006]

15. Prioritized Recommendations

Recommendations are prioritized using the RICE framework (Reach × Impact × Confidence ÷ Effort). P0 items represent showstoppers that should be resolved before any further growth investment.

ID	RECOMMENDATION	REACH	IMPACT	EFFORT	PRIORITY
R-01	Fix cart state management bug — items must persist across navigation	100%	Critical	Medium	P0
R-02	Debounce and deduplicate error toasts — show one notification with clear retry action	80%	High	Low	P0
R-03	Add 3-step onboarding modal for new users: 'Save on gift cards → Share subscriptions → Earn from groups'	100%	Very High	Medium	P0
R-04	Add hero section above carousel: one-line benefit statement + 3 icon pillars (Gift Cards / Share / Earn)	100%	High	Low	P0
R-05	Introduce 'Subspace Verified Host' badge for group owners with >10 completed transactions	60%	High	Medium	P1
R-06	Add buyer protection statement on group join page: 'Subspace covers your first month if host is unresponsive'	60%	Very High	High	P1
R-07	FlexiPay: add maxLength=5, numeric-only input, real-time range validation, and smart placeholder	40%	Medium	Low	P1
R-08	Chat empty state: add contextual card explaining group chats are auto-created on group join	70%	Medium	Low	P1
R-09	Fix KodeKloud 0-star rating — suppress rating display for products with zero reviews	30%	Medium	Low	P1
R-10	Wallet withdrawal page: show estimated credit timeline (e.g. '2–3 working days')	30%	Medium	Low	P2
R-11	Search results page: add filter chips for Category, Discount Range, and Product Type	50%	Medium	Medium	P2
R-12	Auto-apply wallet balance in cart if user has sufficient funds; surface as 'Save Rs.X with Wallet'	40%	High	Low	P2

16. Final Product Scorecard

CATEGORY	SCORE	NOTES
UI Design & Visual Consistency	8.5	Dark theme is polished and consistent. Brand identity is strong. Icon quality is high.
Product Discovery & Navigation	8.0	Instant search, branded categories, and discount badges drive effective browse.
Subscription Sharing UX	8.0	Group listing, slot management, and host profiles are well-structured.
Gift Card Marketplace	8.5	Strong discount visibility, broad catalog, and clean pricing cards.
Search Experience	7.5	Fast and relevant — held back by absence of filter controls.
Profile & Ecosystem Depth	8.0	Friends, Rental History, AI Mailbox, Money Saved show strong product vision.
Help & Support	7.5	FAQ covers common questions. Live chat availability is limited (9AM–6PM).
Wallet & Payout Flow	7.0	Two-step bank verification is sound. Missing withdrawal timeline.
Cart & Checkout Reliability	5.5	CRITICAL: State management bug causes item disappearance. Must fix.
Onboarding & First-Run UX	6.0	No walkthrough. Value proposition not explained. High cold-traffic drop-off risk.
Trust & Safety (Sharing)	6.5	Group owner profiles exist but lack verification badges and buyer protection.
Error Handling & Edge Cases	5.5	Duplicate toasts, zero-star ratings, and broken images reduce confidence.
OVERALL SCORE	7.6 / 10	Solid marketplace foundation with a differentiated product. Fixing checkout reliability and strengthening onboarding will unlock the next growth tier.

Subspace is building something genuinely differentiated in the Indian digital economy — a social savings platform where shared subscriptions, discounted gift cards, and peer trust intersect. The product has strong bones: polished UI, wide brand catalog, and a unique subscription-sharing model with real network-effect potential.

The path to 8.5+/10 runs through two workstreams: **(1) resolving checkout reliability** so purchase intent converts to revenue, and **(2) building trust infrastructure** around subscription sharing so the platform's core differentiator becomes its most compelling reason to stay.

— Devnil | Product Teardown | May 31, 2026
